SPAKALYTE C-2011 (Polyquaternium-7)

Spakalyte C-2011 is an aqueous solution of highly charged cationic polymer. It contributes exceptional properties to both hair and skin care products.

Spakalyte C-2011 is used effectively in hair shampoos and cream rinses. It can boost and stabilize foam while contributing excellent lubricity, wet combability and luster to hair without excessive build-up, Suggested concentrations for shampoos are 2% to 5%.

The film forming ability of Spakalyte C-2011 makes it ideal for use in hair setting gels and lotions, Spakalyte C-2011 provides a high degree of slip to the hair during setting and holds curls firmly without flaking, Spakalyte C-2011 gives hair a look and feel of softness, body and luster, Suggested us levels are 10 to 15%.

Use of Spakalyte C-2011 is also suggested in other personal care products like shaving cream, moisturizing or barrier creams and lotions, bath products and deodorants.

Specifications

Appearance	Viscous liquid
PH 10% solution	7 – 8
Solid content	9 - 10%
Sodium Chloride	1.5 % Max.
Viscosity	5000 - 15000 cps

Storage

Excellent storage stability. Temperature variations will not affect product efficiency but may cause slight increase in viscosity.
